

Backup Exec 15 Software Compatibility List (SCL)

Updated on March 17, 2017

Introduction

This document lists the available operating systems, platforms, and applications specifically supported by Veritas to be compatible with Backup Exec™ 15.

The following guidelines regarding this Software Compatibility List (SCL) should be understood:

- **Veritas support of 3rd party manufacturer products:**

Veritas will cooperate with 3rd party vendors and attempt to assist in the diagnosis of problems found between the 3rd party products and Veritas products. Veritas Technical Support, for the combination of Veritas and 3rd party products listed in this document, is conditional on the 3rd party product being supported by the original manufacturer or vendor. If the original vendor has ceased providing support for a version of their product, Veritas also will no longer be able to provide support on that product in combination with our products.

- **Minor update version support:**

The contents of this document including 3rd party applications, databases, operating systems, in combination with Veritas products represent what has been tested in Veritas labs, or in Veritas-supervised partner labs, but is not intended to be a complete list of supported products and versions. Manufacturers of these products may frequently release minor version updates to their products as maintenance during their product's normal life cycle. (e.g. version 1.x.x.x) that may not be explicitly listed in this document. In these situations where the base or major version of the product is listed as supported in this document but the minor maintenance update is not, Veritas will provide "reasonable effort" support on these versions until specific testing of them has completed.

- **Not every combination of software and hardware has been tested:**

Veritas provides reasonable effort to qualify Backup Exec with as many different operating systems, service packs, hardware platforms, database application service packs, and other applications as possible. However, due to the number of combinations, it is not possible to test all combinations for compatibility. If a particular service pack or version is not listed as specifically supported by Veritas, it may work fine but it has not been explicitly tested by Veritas with Backup Exec and may not be eligible for support.

- **Alternative Configurations:**

Our Licensed Software is designed to interoperate with many types of systems, applications, and hardware. Sometimes a customer may choose to use our Licensed Software in an "**Alternative Configuration**", namely, an environment that has not been validated, approved, or verified to operate with our Licensed Software or which does not support such Licensed Software or only supports limited functionality. Veritas does not support Alternative Configurations, and we have no obligation to provide Support Services to Licensed Software in an Alternative Configuration. Veritas makes no warranty with respect to use of Licensed Software in an Alternative Configuration and any such use is at your own risk. A "**Supported Configuration**" might be converted into an Alternative Configuration where a vendor modifies one of its components that is part of the original Supported Configuration. As a consequence, your Licensed Software would then be operating in an Alternative Configuration. If you experience a problem with the Licensed Software in an Alternative Configuration or if your issue deals with script that was not developed by Veritas or an authorized consulting partner, then we may ask you to reproduce the problem in a Supported Configuration environment. Please note we have no obligation to attempt to resolve problems that cannot be replicated in a Supported Configuration. However, if the problem can be replicated in a Supported Configuration, we will investigate the problem in that Supported Configuration and attempt to resolve it. If the problem cannot be replicated in a Supported Configuration, then Veritas has no obligation to investigate or attempt to resolve the problem.

What's New

This document reflects updates for Backup Exec 15 Feature Pack 5. For details about Feature Pack 5, see: [<https://www.veritas.com/docs/TECH100816.>](https://www.veritas.com/docs/TECH100816.>)

- Exchange 2016 CU2 support has been added.
- Exchange 2013 CU13 support has been added.
- SQL 2016 support has been added.
- SQL 2014 SP2 support has been added.
- Agent for Mac has been added to End-of-Life section.
- Plug-in for VMware has been added to Retiring Soon section.

- Agent for Windows 2003 and 2003 R2 has been added to Retiring Soon section.

- Backup Exec supports only the following languages. No other combination of Backup Exec and operating system language configurations are tested or qualified.

Languages
Chinese (Simplified), Chinese (Traditional), English, French, German, Italian, Japanese, Korean, Brazilian Portuguese, Russian, Spanish

Minimum System Requirements

Items	Requirements
Operating System	<p>The Backup Exec Server can only be installed on 64 bit OS platforms.</p> <p>You cannot install a Backup Exec server on a computer that runs the Windows Server Core installation option of Windows Server 2008/2012/2012R2. You can only install the Backup Exec Agent for Windows on Server Core computers.</p> <p>On the computers that run Windows 2003 R2, ensure that those computers have Windows Imaging Component installed before you install Backup Exec 15. Windows Imaging Component is required to install Backup Exec 15.</p> <p>See the Microsoft website for more information on downloading and installing Windows Imaging Component.</p> <p>You cannot install SQL Express or SQL Server on a Windows Server 2008 computer that is configured in a Read Only Domain Controller (RODC) role. The Read Only Domain Controller role does not let you use the local accounts that are required for SQL Express and SQL Server. When you install Backup Exec on an RODC computer you must select a remote SQL instance for the Backup Exec Database.</p> <p>For Windows Server 2012 and later computers, you cannot install Backup Exec or the Agent for Windows on a volume that is enabled for deduplication in Windows or a ReFS volume.</p> <p>You must install .NET Framework 4.0 on a Windows Server 2003 R2 computer before you install the Backup Exec server.</p> <p>You must install .NET Framework 2.0 SP2 or newer on any Windows Server 2003 R2 computers before you install the Agent for Windows.</p> <p>You must install Microsoft XML Core Services (MSXML 6.0 SP2) on any Windows Server 2003 R2 computers before you install the Backup Exec or the Agent for Windows.</p>
Additional application support	
Internet Browser	Internet Explorer 7.0 or later
Processor	Intel 64, Xeon (64bit), AMD64, or compatible
Screen resolution	1024 x 768
Default instance database repository	SQL Express 2008 R2 SP2

Items	Requirements
Memory	<p>Required: 1GB RAM above the operating system's requirements for the exclusive use by Backup Exec.</p> <p>Recommended: 2 GB RAM (or more for better performance)</p> <p>Note: RAM requirements may vary depending on the operations performed, the options installed, and the specific computer configuration.</p> <p>For the Central Admin Server Option: 1 GB RAM is required; 2 GB RAM is recommended.</p> <p>Symantec Recovery Disk: 1 GB minimum (dedicated) for the multi-lingual version.</p> <p>Virtual Memory Recommendations: 20 MB above the Windows recommended size for total paging file size (total for all disk volumes). Refer to your Microsoft Windows documentation for instructions on how to view or set the paging file size.</p> <p>For memory requirements for the Deduplication Option, you should review the topic 'Requirements for the Deduplication Option' in the Backup Exec 15 Administrator's Guide.</p>
Installation disk space	<p>1.26 GB (Typical installation)</p> <p>1.91 GB (Includes all options)</p> <p>Note: Disk space requirements may vary depending on the operations performed, the options installed, and the specific system configuration. The Backup Exec Database and catalogs require additional space. An additional 525 MB is required for SQL Express. Any disk storage that you use also requires additional space.</p>
Other Hardware	<p>The following hardware is recommended:</p> <ul style="list-style-type: none"> • Network interface card or a virtual network adapter card • CD/DVD drive • A mouse
Storage Hardware	<p>You can use storage media drives, robotic libraries, removable storage devices, and non-removable hard drives.</p> <p>You can find a list of compatible types of storage at the following URL:</p> <p>http://www.veritas.com/docs/000024527</p> <p>Support is available for the first drive in each robotic library when you purchase Backup Exec. To enable support for each additional robotic library drive, you must purchase the Backup Exec Library Expansion Option.</p>

1. Advanced Open File Option for Linux file system support includes ext2, ext3, ext4 and ReiserFS.
2. Backup Exec client-side deduplication is supported for 64-bit Linux systems.
3. File system support includes ext2, ext3, ext4, ReiserFS, JFS, and VxFS.
4. Supported with Open Enterprise Server (OES) 2.0 SP3, with Novell Storage Services (NSS) file system, NDS, GroupWise, and iFolder on 32-bit and 64-bit platforms for SUSE Linux Enterprise Server 10.
5. File system support includes ext2, ext3, and ext4.
6. Advanced Open File Option is not supported.
7. Backup Exec 15 Feature Pack 2, at minimum, is required. For details about the latest Feature Pack, FP5, see: <<https://www.veritas.com/docs/TECH100816>>
8. Backup Exec 15 Feature Pack 4, at minimum, is required. For details about the latest Feature Pack, FP5, see: <<https://www.veritas.com/docs/TECH100816>>
9. File system support includes Btrfs.

The CentOS Project

Name	Version	Service Pack	CPU Architecture
CentOS [1] [2]	6.7		x86-32, x86-64
CentOS [1] [2]	7.0		x86-64

1. Advanced Open File Option is not supported.
2. Backup Exec 15 Feature Pack 2, at minimum, is required. For details about the latest Feature Pack, FP5, see: <<https://www.veritas.com/docs/TECH100816>>

Agent for Mac Compatibility

Notes:

- Single sign-on accounts for OS X are not supported. Local Linux accounts must be used for compatibility with Agent for Mac.
- The Agent for Mac requires that the Macintosh computer have Perl 5.8.8 or later installed.
- Backup Exec does not support adding a new Macintosh server in the Backup Exec servers list with FP5. If you used the Agent for Mac in a previous version of Backup Exec, you can continue to back up and restore your existing Macintosh systems. If you upgrade to a future release of Backup Exec, you will not be able to use the Agent for Mac.

Mac OS X	10.7 (Lion)		x86-64
Mac OS X	10.9 (Mavericks)	.2	x86-64

1. All Mac OS X 10.6 platforms are supported.
2. Includes support for 64-bit, which means the ability to run a 32-bit binary on a chipset that supports the 64-bit instruction set.
3. Workstation and Server

Remote Media Agent for Linux Compatibility

- The Advanced Open File feature for Remote Media Agent for Linux is supported only on select Red Hat Enterprise Linux (RHEL) and Novell SUSE Enterprise Linux Server (SLES) platforms. Please refer to the RHEL and SLES footnotes to identify the supported versions.
- The Remote Media Agent for Linux requires that the Linux server have Perl 5.8.8 or later installed.

Asianux Consortium

Name	Version	Service Pack	CPU Architecture
Asianux [1]	3.0		x86-32, x86-64

1. Backup Exec client-side deduplication is supported for 64-bit Linux systems.

SUSE Linux Enterprise Server [1] [2]	11	SP3	x86-32, x86-64

1. Backup Exec client-side deduplication is supported for 64-bit Linux systems.
2. File system support includes ext2, ext3, and ext4.

Agent for Applications and Databases Compatibility

Notes:

- The Backup Exec Agent for Oracle on Windows or Linux Servers does not support multiple Oracle database versions that are installed on the same computer.
- Advanced Disk-based Option off-host backups of clustered Exchange databases in Exchange 2007/2010/2013 Clustering solutions are not supported.
- Legacy mailbox backups are no longer supported with any version of Exchange. This functionality has been replaced by the Granular Recovery Technology (GRT) feature.
- Backup Exec 15 Small Business Edition only supports Microsoft Exchange, Active Directory, SQL, Sharepoint, and Hyper-V. Any other application or database not specifically listed should be considered unsupported by Backup Exec Small Business Edition at this time.

VMware: Partition / Volume Structure

Configuration	Support
MBR – basic disks	Both application-level Granular Recovery Technology (GRT) and file/folder-level GRT are supported.
MBR – dynamic disks	Supports GRT of all dynamic volume types, except RAID 5.
GPT – basic disks	Both application-level GRT and file/folder-level GRT are supported.
GPT – dynamic disks	GRT is not supported.
Windows Storage Spaces	GRT is not supported.

VMware: File System Support

Configuration	Support
NTFS	Both application-level GRT and file/folder-level GRT are supported.
FAT	Both application-level GRT and file/folder-level GRT are supported.
ReFS	Both application-level GRT and file/folder-level GRT are supported, if the Backup Exec server uses the same version or a later version of the operating system that the guest uses.
Windows Data Deduplication Role/Feature	Both application-level GRT and file/folder-level GRT are supported, if the Backup Exec server uses the same version or a later version of the operating system that the guest uses, and if the Windows Deduplication Role/Feature is enabled on the Backup Exec server.

VMware: VM Disk Structure

Configuration	Support
RDM disks - virtual compatibility mode	The data on the virtual compatibility mode RDM disk is backed up. GRT is not attempted. The virtual compatibility mode RDM disk cannot be restored. Perform a redirected restore to restore data on the virtual compatibility mode RDM disk.
RDM disks - physical compatibility mode or independent disks	The data on the physical compatibility mode RDM disk is not backed up. All other disks are backed up. GRT is not attempted.
Virtual SAN - software-defined shared storage	Versions of Virtual SAN delivered with vSphere 5.5, 6.0 and 6.0 U1/U2 are supported.

Backup Exec Upgrade Compatibility

Upgrade and Rolling Upgrade Compatibility

Notes:

Features or requirements that are no longer supported by Backup Exec may affect your ability to restore backed-up resources. Please review the section titled 'Features or requirements no longer supported by Backup Exec' in this document.

Direct upgrade to Backup Exec 15

Name	Version	Service Pack
Backup Exec for Windows Servers [1]	2010 R3	SP4
Backup Exec [1]	2012	SP4
Backup Exec [1]	2014	All Service Packs

1. To upgrade versions of Backup Exec prior to Backup Exec 2010 R3 to Backup Exec 15, you must first upgrade to Backup Exec 2010 R3 SP4/2012 SP4/2014.

Agent versions that can be temporarily used with Backup Exec 15

Name	Version	Service Pack
Backup Exec for Windows Servers [1]	2010 R3	SP4
Backup Exec [1]	2012	SP4
Backup Exec [1]	2014	All Service Packs

1. You can use previous versions of an Agent with Backup Exec during a rolling upgrade. A warning message is displayed in the job log when previous versions of an Agent are used, but backups and restores can continue normally. New features are disabled until you upgrade the Agent to the same version as the Backup Exec server.

Temporarily Manage Backup Exec Servers with Backup Exec 15

Name	Version	Service Pack
Backup Exec for Windows Servers [1]	2010 R3	SP4
Backup Exec [1]	2012	SP4
Backup Exec [1]	2014	All Service Packs

1. You can perform rolling upgrades in the Backup Exec 15 Central Admin Server Option (CASO) environment, which is included in the Enterprise Server Option. A rolling upgrade lets you upgrade the central administration server from the previous version to the current version first, and then upgrade the managed Backup Exec servers from the previous version to the current version over a period of time. A warning message is displayed in the job log when previous versions of a server are used, but backups and restores can continue normally. New features are disabled until you upgrade the version of all of the Backup Exec servers.

Backup Exec Feature Specific Compatibility

Simplified Disaster Recovery (SDR)

Notes:

- The Create Disaster Recovery Disk Wizard is not supported on 32 bit systems, only use on 64 bit systems.
- The Microsoft Assessment and Deployment Kit (ADK) v8.1 is only supported on Windows Server 2008 SP2 and later.
- If the Backup Exec server is on Windows Server 2003 R2, the Create Disaster Recovery Disk Wizard needs to be installed on a different machine running 2008 SP2 or later. This wizard guides you through the download and installation of the ADK. You can then create the recovery disk by connecting to a remote Backup Exec server or locally with the default options.
- The Agent for Linux, Remote Media Agent for Linux, and the Agent for Mac do not support the Simplified Disaster Recovery feature.
- If the Backup Exec server on which you want to create the Simplified Disaster Recovery disk image does not have an internet connection, and does not have ADK installed, instructions are provided on how to install the ADK. You can then use the Create Simplified Disaster Recovery Disk Wizard to create the recovery disk.

Convert to Virtual

Notes:

- The Convert to Virtual feature supports both Hyper-V and VMware ESX environments.
- Windows Server 2008 SP2 is not supported as a target Hyper-V host for the virtual machine. The target machine must be running Windows Server 2008 R2, or later.
- For the Convert to Virtual feature, conversion of Fibre Channel disk devices (not used as Windows volumes), USB devices, Removable disks, and iSCSI disks are not supported. Both Hyper-V and VMware have these limitations.
- VMware Converter does not convert GPT disks.
- Physical-to-virtual and one-time conversions of 32-bit VMware servers are no longer supported.

Backup Exec Management Command Line Interface

Note:

- BEMCLI is installed with Backup Exec and replaces BEMCMD.

Minimum requirements to run BEMCLI:

- Windows PowerShell V2 or V3
- .NET 3.5 or 4.0
- PowerShell's execution policy must set to a value that is less restrictive than Restricted (e.g. AllSigned). For more information, see Get-Help Set-ExecutionPolicy.

Exchange GRT restore to PST file

This feature allows a user to restore directly to a PST file from a GRT enabled backup of a Exchange database. The PST file must use Outlook friendly mailbox folder structure of being beneath the 'Top of Information Store' only. Sub-folder below this level are not supported.

Outlook versions required on the target server:

- 32-bit Outlook 2007
- 32-bit Outlook 2010
- Outlook 2013 is not supported.
- 64-bit Outlook clients in any version are not supported.

File naming convention:

- Restore creates PST file name which matches mailbox display name in UI
- File name collisions handled with '(n)' suffix. IE: John Smith [John Smith].pst and John Smith [John Smith](1).pst

File size limits:

- Outlook 2007 has 20 GB limit
- The maximum size of the .PST file is 20 GB. If the restore exceeds the size limit, the data is spanned across multiple .PST files which are numbered consecutively.
- When you restore multiple mailboxes in the same job, each mailbox that you restore has a PST file.

32-bit and 64-bit Interoperability

Notes:

- The 64-bit Backup Exec server table illustrates interoperability between a 64-bit Backup Exec server and various remote systems and applications.
- If an agent or option is not listed in the tables below, it is supported on both 32-bit and 64-bit (64-bit) platforms.

64-bit Backup Exec server

Agent	32-bit Windows OS	64-bit Windows OS	Linux
Enterprise Vault	N/A	Supported	N/A

1. 64-bit Backup Exec 15 servers will back up 64-bit Domino server on a 64-bit OS. Note that a 32-bit Domino server installed on a 64-bit OS is also supported.
2. SQL Server/Express 2008 32-bit and 64-bit versions are supported as database backend servers.
3. Both 32-bit and 64-bit SQL Server/Express 2005 are supported on Windows Server 2003 64-bit.

Cluster Support

For Windows operating systems, Backup Exec supports file share clusters for all supported versions and variations of Windows that feature cluster services (MSCS).

Note:

- File System Archiving cannot be done from the Windows 2008 cluster shares. Windows 2008 R2 cluster shares are required.

Name	Notes
Microsoft SQL Server 2005	Microsoft Cluster Server
Microsoft SQL Server 2008	Microsoft Cluster Server
Microsoft SQL Server 2008 R2	Microsoft Cluster Server
Microsoft SQL Server 2012	Microsoft Cluster Server

Microsoft Exchange 2016	DAG [2]
IBM Lotus Domino 8 [3]	Microsoft Cluster Server
IBM Lotus Domino 8.5 [3]	Microsoft Cluster Server
IBM Domino 9 [3]	Microsoft Cluster Server
Oracle	Supported with RAC, Microsoft Cluster Server and FailSafe.

1. CDO must be installed on the Exchange server to run GRT backup and restore jobs.

2. Window Enterprise Edition is still required since a DAG (Database Availability Group) still uses pieces of Windows Failover Clustering.
3. While these versions of Lotus Domino should continue to work in Backup Exec 15, no development is planned to support newer versions of Lotus Domino. Please refer to the 'Retiring Soon' section below.

End-of-Life information

Features and requirements no longer supported by Backup Exec

EOL Notice: These operating systems, backward compatibility for restores, and rolling upgrades, third-party software applications, and Veritas products are no longer supported for use with this version of Backup Exec for Windows.

- The Version EOL Started identifies the version of Backup Exec that no longer provides the support and includes all subsequent releases.

1. Backup Exec does not support adding a new Macintosh server in the Backup Exec servers list with FP5. If you used the Agent for Mac in a previous version of Backup Exec, you can continue to back up and restore your existing Macintosh systems. If you upgrade to a future release of Backup Exec, you will not be able to use the Agent for Mac.

Retiring Soon: Items planned for end-of-life

The Backup Exec Agents, Options, and functionality that are listed in this section may not be listed as supported in a future Software Compatibility List. This list of items may change up until a Feature Pack or new Backup Exec version is released. To help customers plan accordingly, Veritas will provide advance notice of the items that will be unavailable.

Current supportability of these items is not affected. Normal Technical Support lifecycle policies for Veritas enterprise products still apply to these items.
