Veritas Risk Advisor

Release Notes

Technical Support

Technical Support maintains support centers globally. All support services will be delivered in accordance with your support agreement and the then-current enterprise technical support policies. For information about our support offerings and how to contact Technical Support, visit our website:

<https://www.veritas.com/support>

You can manage your Veritas account information at the following URL:

<https://my.veritas.com>

If you have questions regarding an existing support agreement, please email the support agreement administration team for your region as follows:

Worldwide (except Japan)

CustomerCare@veritas.com

Japan

CustomerCare_Japan@veritas.com

Documentation

Make sure that you have the current version of the documentation. Each document displays the date of the last update on page 2. The latest documentation is available on the Veritas website:

<https://sort.veritas.com/documents>

Documentation feedback

Your feedback is important to us. Suggest improvements or report errors or omissions to the documentation.

Include the document title, document version, chapter title, and section title of the text on which you are reporting.

Send feedback to:

doc.feedback@veritas.com

You can also see documentation information or ask a question on the Veritas community site:

<http://www.veritas.com/community/>

Veritas Services and Operations Readiness Tools (SORT)

Veritas Services and Operations Readiness Tools (SORT) is a website that provides information and tools to automate and simplify certain time-consuming administrative tasks. Depending on the product, SORT helps you prepare for installations and upgrades, identify risks in your datacenters, and improve operational efficiency. To see what services and tools SORT provides for your product, see the data sheet:

https://sort.veritas.com/data/support/SORT_Data_Sheet.pdf

About this document

This document provides important information about Veritas Risk Advisor (VRA) 7.3.3. Review this entire document before you install and use VRA 7.3.3.

Getting more information or help

- For the latest information about updates, patches, and software issues regarding this release, see the following Late Breaking News (LBN):
https://www.veritas.com/support/en_US/article.TECH68401
- For more information about system requirements and software limitations, see the following documents:
 - Veritas Risk Advisor Support Requirements
 - Veritas Risk Advisor Deployment Requirements
- If you forget or lose the VRA administrator password, contact Veritas Technical Support.

Overview of Veritas Risk Advisor

VRA is a risk detection and management solution that enables organizations to diagnose high availability (HA) and disaster recovery (DR) vulnerabilities (gaps) and optimize data protection. It empowers enterprises to effectively manage business continuity implementations to ensure that critical business data is protected at all times.

VRA is an agentless discovery and monitoring tool that automatically scans your enterprise infrastructure to detect vulnerabilities in the HA/DR configurations. It alerts you to any potential gaps, best practice violations, and service level agreement (SLA) breaches.

The information and insight provided by VRA includes:

- Detailed information about the current data protection and HA/DR risks and the prioritized actions that you can take to fix them
- Recommendations for improving HA/DR performance based on best practices and recovery objectives
- Differences that it identifies between the production, standby, and DR systems
- Auditing and compliance documentation, including a topology map of your production environment, DR configuration, and dependencies

Changes introduced in this release

The following changes have been introduced in this release.

New features and highlights

This VRA release introduces new features and significant enhancements in the following areas:

Area	New feature
VMware vSAN	Support has been added for VMware vSAN virtual storage. VRA collects the needed information through the corresponding vCenter server and analyzes it for risks.
Kerberos Authentication	VRA allows scanning Linux hosts with MIT Kerberos authentication through dedicated credentials.
Enhancements to Oracle support	Numerous enhancements have been added to data collection, modeling and data analysis across the Oracle stack.

Documentation packaging change

Beginning with release 7.2, VRA documentation will not be included in the tar ball with the VRA software. You can access the VRA docs at the following location:

<https://sort.veritas.com/documents>

Note: You need to select Risk Advisor in the Product list.

Additional changes and enhancements

The following additional changes and enhancements have been introduced in this release.

New privileged commands

The following new read-only privileged commands are required:

Command	Required for scanning

New/Modified system properties

The following system properties are added or modified:

Category	Property	Description
Collection	Path of krb5.conf file for Kerberos authentication	Specify the path of krb5.conf file needed for Kerberos authentication. Default: C:\\ProgramData\\KerberosV5\\krb5.conf
Email Settings	Send individual email for each address	Default: No Changing to "Yes" will enable parallel sending of emails to multiple recipients – potentially speeding up processing time. When scheduled report are configured, this could also potentially shorten the Full Cycle.

Data collection enhancements

The following enhancements are included:

ID	Description
P-8571	Enhanced collection of Oracle DataGuard information through OEM
P-8641	Enhanced collection for Isilon OneFS version 8+
A-1297	Add collection for Linux flavors
N-2308	Added collection for RAC Heartbeat

Risk detection enhancements

The following risk detection enhancements are included:

ID	Description
G-2152	Gap 00360NFSIA enhanced to allow granular suppression
G-2222	Gap 00558VCSHB logics enhanced to cover additional cases

Application enhancements

The following application enhancements are included:

ID	Description
A-1334	Use credentials for SAPI password
N-2292	External Ticketing Integration - Generic REST API update

ID	Description
N-2260	Database Views - Add WITH GRANT OPTION to sysapi so that other users could access the tables
A-1376	Implement caching mechanism to speed up data analysis time

Important Notes

Review the following important notes about the various VRA configurations.

Oracle database locale requirement

The Oracle instance used as the backend database for VRA must be configured with the English Locale. This requirement is complementary to other requirements identified in the Deployment guide and/or other documents.

Internet Explorer requirement

Internet Explorer (IE) Enhanced Security must be disabled on the VRA server. Accessing the VRA application using IE on the VRA server when IE Enhanced Security is enabled can lead to configuration errors. This requirement is complementary to other requirements identified in the Deployment guide and/or other documents.

Scanning HP 3PAR using InForm CLI proxy

When using InForm CLI proxy to scan HP 3PAR arrays, it is mandatory to use encrypted passwords.

Scanning NetApp storage systems using SSL

If an error is experienced when connecting to NetApp storage systems using SSL, perform one of the following changes to resolve the connection error:

- Enable TLS on the target NetApp storage system using the option `tls.enable` on command.
- Comment the following line in the `java.security` file of the Java installation used by the master/collector servers:

```
jdk.tls.disabledAlgorithms=SSLv3
```

The default path for the file is `C:\Program Files\Java\jre1.8.0_40\lib\security`.

This option was uncommented on Java v8.31.

Using the Backup Host Role

To avoid false tickets regarding storage access or SAN I/O configuration inconsistency that involves backup servers, configure the backup servers inside a business entity and assign the 'Backup' role.

Enabling data collection from vSphere Infrastructure Navigator (VIN)

In order to enable remote data collection from VIN, the following steps must be performed on the VIN appliance:

- Edit the `/opt/vadm-engine/webapps/jolokia/WEB-INF/classes/jolokia-access.xml` configuration file and specify the IP Address of the VRA collector that will connect VIN.
- Run the `/opt/vadm-engine/bin/disable_security.sh` script in order to enable remote connection (disables some of the local security configurations such as firewalls).
- Restart the VIN discovery engine by running `/etc/init.d/vadm-engine restart`.
- Check connection by browsing to the `http://[VIN IP]:8080/jolokia` URL.

Scan of Storage and Replication Management servers

It is recommended to scan all production/DR storage management servers as hosts in step 4 of the configuration wizard – also in the case they are already scanned through step 2. Scanning the servers as hosts ensures all replication group information is collected and analyzed.

Scan of Windows hosts through WMI

Scanning of Windows hosts updated with KB3139940 might fail with Access Is Denied message. To overcome this failure, please make sure that the user configured to authenticate to this server is a member of the Local Administrator group on the VRA server. As of version 7.2.1, VRA provides also an alternative method of scanning Windows servers using WMI which requires PowerShell version 5.1 or higher.

Recommended display size and resolution

VRA's web user interface is best displayed and operated with Full HD resolution (1080p) on 21" screens (or larger) with aspect ratio of 16:9. Using smaller screens and/or coarser resolution might cause some information to be displayed partially. When that happens, the browser zoom-out function can be used to entirely display such content.

Fixed issues

This VRA release includes the following fixed issues.

Scan and data collection issues

The following issues are resolved:

ID	Description
P-8653	Can't scan SCVMM 2016
N-2332	/usr/sbin/ip fails on RH5
A-1307	unix_rac_collection.sh script, crsctl status output details cut by console jump line
A-1326	WMI_Powershell incorrect status on failure
N-2263	OEM collection filters out relevant objects, leading to possible false negatives
P-8660	False Scan error on Linux/UNIX servers not running Oracle
P-8626	Aggregated Script with Custom Collection run some commands twice
A-1357	PV to SV issues - ESXi Hosts to IBM A9000 AA storage

Data Analysis issues

The following issues are resolved:

ID	Description
P-8544	02200HCD (host comparison) – non-impact difference due to dynamically calculated kernel parameters
G-2180	Gap 00325SSIOP – non-impact ticket
G-2165	Gap 02410SRMPGCG – non-impact ticket
G-2241	Gap 00541VCSROD non-impactful tickets
G-2141	Gap 00243SBMPNE – non-impactful tickets
N-2329	Gap 00242HostAccessingRemoteDevices performance degradation

Application and user interface issues

The following issues are resolved:

ID	Description
N-2341	NetApp vServers are not recognized as "In Scope"
A-1328	Unable to scroll up/down in 'Contained Business entities' while adding Business Entity using wizard
N-2295	Database Views - Errors in log while trying to update item scan status
N-2293	Multiple rows in SAPI_HOST when host is a member of 2 clusters or VM is "virtualized" on 2 hosts
A-1351	Import of SLA policies is not working after SLA policy revision

Known issues

This VRA release has the following known issues planned to be fixed in future releases.

If you contact Technical Support about one of these issues, please refer to the incident number in brackets.

Ticket and report issues

The following ticket and report issues exist:

ID	Description	Workaround
[A-14]	Due to a large number of HBA properties, the Host HBA Comparison report may not be readable when executed for Linux and exported as PDF/RTF.	Export the report to excel.
[A-19]	After suppressing a gap and performing multiple ticket searches, the history tab of a ticket of the suppressed gap may show multiple suppression records.	-
[A-510]	Report: What-If Impact Analysis: Report generation fails under certain circumstances.	-
[A-551]	VMware Summary report contains incorrect set of ESXi hosts; some hosts are potentially not marked for the scan while other scanned hosts may fail to be included.	-

Veritas Risk Advisor

Release Notes

ID	Description	Workaround
[A-578]	Gap Id 1601 (Snapshots enabled for Zerto Virtual Manager - ZVM) - when ticket is exported, impact contains ">".	-
[G-1504]	Gap Id 360 (NFS options inconsistency) may generate large tickets or non-impactful tickets.	Suppress the ticket.
[G-1580]	Gap Id 700 (SLA) may fail reporting an exception in the log file.	-
[G-1591]	Gap Id 80459 (Network redundancy and resiliency) may open incorrect tickets for iSCSI environments.	Suppress the ticket.
[G-1634]	Gap Id 225 (Mixture of database files) may open tickets that include no details under the description section.	Suppress the ticket.
[G-1716]	Gap Id 306 (Inconsistent Database Replication) may fail reporting an exception in the log file.	-
[G-1734]	Gap Id 335 (SAN switch single point of failure) may open incorrect tickets for logical ISL between logical Brocade switches.	Suppress the ticket.
[P-3314]	When rollback segments and data files are separated, VRA may generate false tickets about database files stored on a mixture of RAID types.	Suppress the ticket.
[P-5975]	When cluster nodes are scanned using different collectors, VRA may generate false tickets if the collectors' times are not synced.	Suppress the ticket.
[P-6484]	In specific scenarios, when a replication source becomes the target and the target becomes the source, VRA does not calculate the data age for the replication. This error may occur when, between two scans, the source is changed to be the target and the target is changed to be the source.	-
[G-1791]	Gap Id 500 (VCS Online mount resource failure) may open inaccurate tickets reporting incorrect file systems and block devices mismatches.	-
[P-8161]	Gap Id 420 (vMotion not configured) may open non-impactful tickets when vMotion is enabled on distributed virtual switches.	-

Veritas Risk Advisor

Release Notes

ID	Description	Workaround
[P-8118]	Gap Ids 213 and 250 may open tickets with no textual description.	-
[G-1829]	VRA does not take Affinity and VM to host rules into consideration in certain Gap signatures and non-impactful tickets may be opened.	-

Topology view issues

The following topology view issues exist:

ID	Description	Workaround
[A-534]	Incorrect Topology connection between 3PAR Vol and Masking Configuration.	-
[P-8095]	NetApp vServers are not presented in the topology as storage arrays.	-

Application issues

The following application issues exist:

ID	Description	Workaround
[A-10]	When adding Host URL in the Active Directory Configuration screen, the size of the list box is decreased with each host URL added.	-
[A-21]	Deleted Domains will be presented in the domain field of the Add User dialogue.	-
[A-377]	The dashboard may present inactive collectors as collectors that are down.	-
[A-384]	The system enables users to select credentials type which are unsupported for Active Directory authentication, such as "Rotating Password" and "SSH Public Key".	-
[A-448]	In rare conditions, users may experience an HTTP 404 Page not Found error when accessing the VRA user interface.	Delete the cookies from IE, open a new browser window and login.

Veritas Risk Advisor

Release Notes

ID	Description	Workaround
[A-511]	Error when adding SYMCLI proxy with no description.	Add a description when adding a SYMCLI proxy.
[A-512, P-8104]	Windows host/storage proxy cannot be scanned using credential sets defined with domain suffix (e.g. user@domain).	Redefine the credential with domain prefix (e.g. domain\user).
[A-521, A-520, A-523]	In certain conditions, Gap Tuning page fails to un-suppress tickets or suppresses tickets that should not be suppressed.	-
[A-532]	Changing policy for EMC CLARiiON/VNX array with no associated proxy may fail.	-
[A-55]	Users may see and edit scheduled reports tasks that were created by other users, potentially for entities external to their own user scope.	-
[A-579]	Installer starts the Tomcat service even when the checkbox is unchecked	-
[A-69]	In some cases, a detailed error message regarding the AD connection error is not presented.	Review the rg.0.log file for additional information or contact Support.
[G-1717]	The Business Continuity Risk Report may present incorrect number of Storage arrays scanned under certain conditions.	-
[P-7835]	When exporting information presented in the "View Databases" dialogue to Excel, some of the columns in the output file contain object ID instead of name.	-
[P-8067]	Duplicate system events logged when SAN switches are scanned.	-
[P-8202]	When testing SMTP configuration and authentication fails, an incorrect message is presented regarding successfully completing the test.	Check your email to ensure a test email was in fact received.
[A-633, P-8195]	When entering an invalid character or white space in the IP field of a target management or storage proxy, scan may fail and the scan symbol will continue to spin.	-

Veritas Risk Advisor

Release Notes

ID	Description	Workaround
[A-635]	Agent cannot be deleted from the Agents page if it was already uninstalled on the server	First delete the agent in the GUI and only then perform the uninstall operation.
[A-683]	When send ticket by email fails, no notification is presented to the user.	-
[A-696]	Change CLI path under the Scan Troubleshooting page is occasionally disabled.	-

Scanning issues

The following scanning issues exist:

ID	Description	Workaround
[A-25]	The Scan Status report does not include information regarding scan of management consoles.	Review the status of the consoles in the Configuration tab or in the System Log report.
[A-353]	In rare cases, the “Command with high importance timed out” scan issue may fail to include the name of the script.	-
[A-505]	SRM may fail with the following message: “Unsupported version URI urn:srm0/2.0”.	Contact support.
[P-4310]	VRA shows unsupported storage array devices as direct-attached storage (DAS) devices, which may open false tickets.	Suppress the tickets or avoid scanning hosts that use storage that VRA does not support.
[P-4438]	If VRA scans a database when the database is suspended, most queries may fail.	-
[P-5049]	VRA cannot discover DB2 on a UNIX host that is scanned through a proxy.	Scan the host directly and not through the proxy.
[P-5934]	VRA ignores NICs that are configured as “unplumb” on Solaris hosts.	-
[P-6053]	Free space information is not available for Logical volumes on Windows 2003 Servers.	-

Veritas Risk Advisor

Release Notes

ID	Description	Workaround
[P-6480]	VRA may fail to discover the correct LUN for UNIX hosts accessing IBM DS or XIV storage.	Contact Support for assistance.
[P-6481]	VRA may fail to present IBM DS GlobalMirror replication.	Contact Support for assistance.
[P-6962]	When the password contains special characters, EMC VNX arrays scan fails.	Change the password such that no special chars are included.
[P-6964]	If the security level on a "Navisecli" server is set to MEDIUM, EMC VNX scan hangs.	Reduce the security level on the Navisecli server to allow scanning.
[P-7041]	Information regarding inactive disk groups is not always collected.	-
[P-7196]	In rare cases, HBA model, driver and firmware info is not available for Linux systems.	-
[P-7659]	When executing a scan of a vCenter with no hosts, the scan fails.	-
[P-7667]	When HMC is scanned in an IBM Flex environment, the scan may fail.	Contact support for assistance.
[P-7773]	In certain cases when multiple VCS clusters with the same name exist, VRA may incorrectly merge these clusters to a single one.	-
[P-7978]	LUN Map info is not collected for IBM V7000, Storwize and SVC.	-
[P-8007, P-8006]	Brocade and HP Virtual Connect switches scan may fail and a scan issue will not be reported.	-
[P-8020]	Unnecessary scan issue for 3PAR showr* commands when remote copy is not licensed.	Suppress the scan issue.
[P-8035]	NaviCLI and InformCLI scan may wait on user prompt and fail with timeout. Certain storage proxies may enter user-interactive mode upon executing the first command by a user, and ask to approve certain initial settings.	Such settings should be completed prior to scanning with VRA, as interactive mode will cause the scan to hang.

Veritas Risk Advisor

Release Notes

ID	Description	Workaround
[P-8039]	Unnecessary scan issue reported for symcfg command when no RDF replications are configured.	Suppress the scan issue.
[P-8061]	Unnecessary scan issue for Microsoft MPIO when the mpclaim.exe command returns a "No MPIO disks are present" message.	Suppress the scan issue.
[P-8177]	HBA data collection may fail on certain Windows 2003 servers.	-
[A-688]	Killed scan tasks appears as "Timed out".	-
[P-8443], [P-8421]	Unable to scan Oracle DB due to VIP not found on host	
[P-8440]	SCVMM Hyper-V replicas with same name as primary cannot be scanned	
[P-8438]	Exception on vCenter scanning within Full Cycle when parallel scan of vCenters is enabled	
[P-8389]	VG not connected to PV on HP/UX hosts with DMP	
[P-8379], [P-8365]	Cisco DCNM zone collection issues	
[P-8337]	Invalid Windows HDS HDLM string format	
[P-8408]	Solaris zones discovery incorrectly assumes uniqueness of zone names	
[P-8491]	Some properties of Oracle DB are not collected when DBs are scanned via OEM	

Limitations

You may encounter the following limitations when working with VRA.

Assigning a profile to an Active Directory group

- When assigning a profile to an AD Universal Group, the VRA master server must have access to the Global Catalog of the AD Forest.
- When assigning a profile to an AD Local Domain Group, VRA will not be able to assign the Profile to AD Users from a different Domain - even though such configuration is valid within AD. In other words - an AD user can log in to VRA (with all the correct profiles assigned) only if each AD Local Domain Group it belongs to is part of the same AD Domain the AD user belongs to.

Oracle database discovery

To discover Oracle databases, start the Oracle process or ensure that the `/etc/oratab` or `/var/opt/oracle/oratab` file is present.

Recovery point objective (RPO)/service level agreement (SLA)

VRA also has the following RPO/SLA limitations:

- RPO/SLA is not supported for active HDS asynchronous HUR replication.
- RPO/SLA for NetApp only works for direct replication from primary devices.
- RPO/SLA for CLARiiON only works for direct replication from primary devices.
- RPO/SLA for HP 3PAR only works for direct replication from primary devices.
- RPO/SLA is not calculated for EMC CLARiiON MirrorView/S.
- RPO/SLA is not calculated for IBM DS.

Incorrect time logged in system log files when DLS is not automatically updated

VRA log files may log incorrect timestamp when the VRA server is not configured with automatic Day Light Saving adjustment.

VRA Database Views include a subset of the information collected from target systems

VRA Database Views do not include information regarding VMware Virtual Networking, Database Tablespaces, Installed Software and Kernel Parameters, RecoverPoint consistency groups, LV mirroring, Application Servers and does not include historical data.

In specific cases scan error messages are not sufficiently informative

The Scan Troubleshooting screen occasionally presents scan error messages that include the error code but no additional details.

Workaround: Run the erroneous command or script manually to see the full scan error message. If further assistance required, contact Support.

Incorrect tickets may open when target systems are not scanned successfully

When certain target systems are not scanned successfully, VRA may open incorrect tickets as a result.

Workaround: Search for the symbol specifying whether scan issues exist in the ticket summary, and review any scan issues reported in the ticket or in the Scan Troubleshooting prior to reviewing the risk details.

Incorrect tickets may open when file read permission is not granted

When VRA cannot read or list a file or a directory, incorrect tickets may open.

Workaround: Take particular care to grant the required privileges for the user configured for the scan, as described in the VRA deployment guide [A-619].

When importing objects into VRA, special characters are converted

When importing names and properties of objects from CSV/CMDB/API, special characters such as “&”, ‘no-break-space’ and certain UTF8 chars are converted to alphanumeric chars. [A87, A105]

SSH key supports only keys with less than 4000 characters

The SSH key supports only those keys that contain less than 4000 characters. [P6645]

HMC is required in order to scan IBM VIO environments

If HMC is not available and IVM is used, contact Support for assistance. [P6835]

CSV Import of Business Entities does not create new sites

The Import process will use the site field to correctly match hosts specified in the CSV file to existing hosts, but will not create the sites if they do not exist in the system. [A-15]

Workaround: Use step 3 of the Configuration Wizard to define any missing sites (manually or through CSV import).

Incorrect replication mode and state collected for an array included in the symavoid file

When a scanned Symmetrix array is included in the symavoid file on a SYMCLI server, it will not correctly report the status and mode of replications for the array.

Workaround: Take care to use SYMCLI servers that can effectively report on the replication mode and status – both for the source and target arrays.

SAN switches installed with unsupported versions should not be scanned

Refrain from scanning a Fabric if it includes switches that are installed with an unsupported version. For information regarding supported versions, refer to the VRA Support Requirements document. [P-7971]

JDBC-SSL is not supported for database scanning

It is not possible to connect and scan databases using JDBC SSL. [P-7964]

Linux Software RAID devices managed by mdadm are unsupported

As a result, VRA may report a non-actionable scan issue regarding unknown mdadm host physical volumes not connected to storage volumes. [A-618]

SAN switches are not automatically removed when no longer discovered by their proxy

SAN switches are not automatically deleted when their proxy no longer discovers them. [A-522]

Modal dialogs cannot be moved on the screen

Modal dialogs (pop-up windows) cannot be moved on the screen – use mouse wheel to scroll when needed.

Topology module might refresh when scrolling other pages on Firefox

Topology module might refresh (flicker) when scrolling other pages (for example – ticket info) on Firefox – this is due to a known Firefox issue published by Mozilla.

Upgrading to this release

For information about installing VRA, see the *Veritas Risk Advisor User's Guide*. In addition, review the *Veritas Risk Advisor Deployment Guide* for guidance about the VRA infrastructure requirements and the preparations needed for scanning your datacenters.

You can upgrade to VRA 7.3.3 only from version 7.3.2. If a system has an earlier version of the product installed, you must upgrade to version 7.3.2 before upgrading to version 7.3.3.

Consider the following before you begin the upgrade process:

- Carefully read the release notes in full, and make any necessary changes to the VRA infrastructure and/or to user account permissions as required, and ensure sufficient free disk space is available on the master server.
- Verify that you have an up-to-date backup of the VRA server disk drives using your standard backup tools, and an up-to-date VRA database export. A database export can be generated using the EXPDP or EXP Oracle commands.
- Once the upgrade on the master VRA server is completed and the Tomcat service starts, VRA automatically checks and upgrades the VRA collectors. There is no manual collector upgrade process. For gradual collector upgrade, disable the collectors before initiating the upgrade on the master server, and gradually enable the collectors you wish to upgrade following the completion of the software upgrade on the master server.

- The upgrade requires that you completely stop all VRA operations, including data collections and data analysis. While it is fully automatic, the length of the upgrade process may require several hours to complete in large environments. During this time, it is important not to restart the VRA server or terminate the upgrade task. In addition, it is essential that the Oracle database used by VRA be available throughout the upgrade process.

To upgrade from version 7.3.2 to version 7.3.3

1. Login as a local administrator to the master VRA server.
2. Run the `VRA_7_3_3.exe` file as an administrator.
3. On the Welcome screen, click **Next**.
4. When prompted, select **Yes, upgrade VRA 7.3.2 to 7.3.3**.
5. Accept the License Agreement and click **Next**.
6. Accept the GNU License Agreement and click **Next**.
7. Specify whether to perform a database export prior to upgrading and whether to start Tomcat after the upgrade completes, and click **Next**. Veritas recommends that you keep the default settings.
8. Click **Install** to begin the software upgrade process. This process may require up to several hours to complete, depending on the size of the scanned environment.
9. Click **Finish** to close the installer.
